REX PLUS - Corrosion and Acid-Resistant Stainless Steel Roller Chain

REXPLUS from Rexnord. This new generation of corrosion and acid-resistant roller chains now fulfills the highest of demands with regards to quality, dependability and service life. Even in situations where water is a factor or where regular maintenance is difficult, one of the most advanced roller chains in the world dominates with its excellent performance. When normal chain speed regularly reaches 1,5 m/sec., RexPlus can handle the pace, even under extreme loads. RexPlus can also withstand temperatures ranging from -40°C to 400 °C, as well as steam. Through the use of new materials and consistent further development, RexPlus goes well beyond the limits of conventional stainless steel chains.

RexPlus is available in the following sizes: 08 B-1 to 16 B-1 and 08 B-2 to 16 B-2.

Features	Benefits
Extremely high rust and acid-resistance	• Can withstand environments with water and steam
High performance, harder material	• Improved resistance to wear
High Loading Capacity	• Continuous running - no breakdowns
Improved Manufacturing Process	• Optimized Fatigue Stength
Maximum hygiene	• Absolute cleanliness via seamless rollers
